FABENCo

The Self-Closing Safety Gate

Adaptable

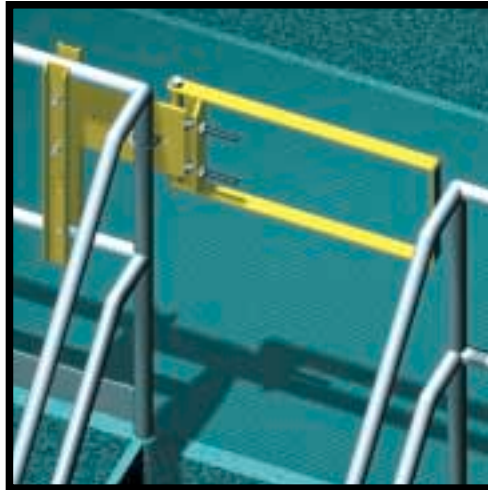

We'd like to introduce you to the one of the best fall protection devices on the market today – The FabEnCo Self-Closing Safety Gate.

First and foremost, our Self-Closing Safety Gate will dramatically increase the safety of your employees if you have unprotected openings on your ladders, platforms and stairs, as well as on your catwalks, mezzanines and machine guarding. Force-tested up to 300 lbs., the FabEnCo Safety Gate is easy to pass through and it eliminates the need to stop and lift a bar or undo a chain.

Secondly, it's easy to install. It clamps onto your existing handrail and can be installed in 10 to 15 minutes using simple hand tools. There's no cutting, welding or drilling necessary.

Our gate is shipped directly to you from our manufacturing facilities in Houston, Texas. It arrives at your facility with all the mounting hardware, including a J-bolt for mounting to an angle post, as well as a U-bolt for mounting to a pipe post. Easy to follow mounting tips are included.

Versatile

Adjustable

The FabEnCo Self-Closing Safety Gate can be mounted on either the left or the right side of your handrail opening. Once you've adjusted the stop bolts, the gate's reliable stainless steel spring will automatically close the gate to the stop point you've set on the gate - up to a 90 degrees angle.

Gates are available in galvanized steel, aluminum and stainless steel (safety yellow optional) and can be ordered in standard sizes from 16" to 36". To protect openings up to 6 feet, simply mount gates on both the right and left rail in a one-way "saloon door" configuration.

FabEnCo has engineers on staff should you require special modifications to adapt our safety gate to unusual openings.

Bottom line...the FabEnCo Self-Closing Safety Gate delivers a whole lot of value for very little cost.
